

Out of This World Elementary School

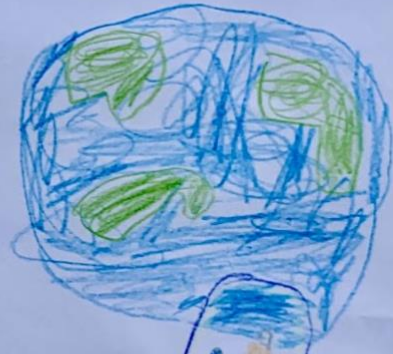

By Eli Kauffroath, 2nd Grade

The school of the future takes place on the moon. A portal is used to transport kids from all over the world up to the moon school. The school is under a dome so that students don't have to wear spacesuits. Mr. Meteor and Mrs. Lemon are two of the teachers on the moon. Mr. Meteor teaches meteorology and knows 50 different languages. Mrs. Lemon teaches science and has a classroom pet; a hamster named Big Cheeks. Big Cheeks likes to wear a space helmet even though he doesn't need to. Ben is one of the students in Mr. Meteor's class. He is new to the school and makes a friend, named Kevin, who is from France. At lunchtime, Ben, Kevin, and the other students go to the cafeteria to eat space food and then can ride a spaceship that teaches them about other planets as they ride around the dome.

One day, it is announced that a meteor is on its way to hit the moon. The teachers and all the students must build a protective shield in the control room. They use what they have learned in their classes to build a shield. The students use their knowledge of gravity and speed in their design. Ben creates a pressure plate to activate the shield. When it is done, they press the button and the shield is put in place. The meteor hits the shield and breaks into small pieces. Giant vacuum tubes suck up the pieces so that Mr. Meteor can study the meteor. All the students, teachers, and Big Cheeks the hamster cheer, "Hooray! We did it!", after saving the moon and their school. They celebrate with astronaut ice cream.

The End
