

## Welcome Back to 2023,

We just went into the year 2123 five months ago, to start out, it was just an ordinary school day, but, when I came home, I found something on my bed. It was from my great grandmother, it said, "Hey darling it's Nana, you are most likely reading this on your birthday May 28<sup>th</sup>. I first would like to start with a happy birthday, you are getting so big it's crazy. The purpose of this note is how school was Back in 2023, I read the note, she was talking about how different 2023 schools we're, I didn't expect for much to be that different, but it actually was so different! Now they have NO books, in 2023 we only had books, paper, pencils, markers, and a tiny bit of computer time. Also back in 2023, not only were there 2 options for school lunch there was only 1 lunch lady but now in 2123, they have 5 meat options 5 vegan options 5 gluten options 5 lactose intolerant options, and 5 peanut free options. We also have 10 lunch staff. Students are also permitted to bring their own lunch from home. In 2023 they used to have different classes for different subjects, nowadays, we have 1 student per teacher that teaches every subject. It sounds stressful but that's why teachers today will be paid more. I'm guessing that they make \$75 an hour. But then in 2023, teachers only made \$23-\$36, they would have to work over a week just for food water bills taxes and Utilites. I'm glad that teachers can afford important things now. Anyways, nowadays you would think we have portals. We actually don't, they school provides hoverboards to get around. They don't cost anything thank goodness. The 2123 school year is ending, I hope school does not change. I heard in 2023 they changed every year especially since this virus called Corona Virus, all the schools went into lockdown, I really hope that does not happen soon. In conclusion there are more differences in the last 100 years than I thought.
